## Product datasheet for RC204454L3V

## TAK1 (MAP3K7) (NM_003188) Human Tagged ORF Clone Lentiviral Particle

## Product data:

Product Type:
Product Name:
Symbol:
Synonyms:
Mammalian Cell
Selection:
Vector:
Tag:
ACCN:
ORF Size:
ORF Nucleotide
Sequence:
OTI Disclaimer:

OTI Annotation:

RefSeq:
RefSeq Size:
RefSeq ORF:

Lentiviral Particles
TAK1 (MAP3K7) (NM_003188) Human Tagged ORF Clone Lentiviral Particle
TAK1
CSCF; FMD2; MEKK7; TAK1; TGF1a
Puromycin
pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Myc-DDK
NM_003188
1737 bp
The ORF insert of this clone is exactly the same as(RC204454).

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

## NM 003188.2

2912 bp
1740 bp

| Locus ID: | 6885 |
| :--- | :--- |
| UniProt ID: | $\underline{043318}$ |
| Cytogenetics: | $6 q 15$ |
| Domains: | pkinase, TyrKc, S_TKc |
| Protein Families: | Druggable Genome, Protein Kinase |
| Protein Pathways: | Adherens junction, MAPK signaling pathway, NOD-like receptor signaling pathway, RIG-I-like <br> receptor signaling pathway, T cell receptor signaling pathway, Toll-like receptor signaling <br> pathway, Wnt signaling pathway |
| MW: | 64 kDa |
| Gene Summary: | The protein encoded by this gene is a member of the serine/threonine protein kinase family. <br> This kinase mediates the signaling transduction induced by TGF beta and morphogenetic <br> protein (BMP), and controls a variety of cell functions including transcription regulation and <br> apoptosis. In response to IL-1, this protein forms a kinase complex including TRAF6, <br> MAP3K7P1/TAB1 and MAP3K7P2/TAB2; this complex is required for the activation of nuclear <br> factor kappa B. This kinase can also activate MAPK8/JNK, MAP2K4/MKK4, and thus plays a <br> role in the cell response to environmental stresses. Four alternatively spliced transcript <br> variants encoding distinct isoforms have been reported. [provided by RefSeq, Jul 2008] |
