# Product datasheet for RC204499L3

## beta 2 Adrenergic Receptor (ADRB2) (NM\_000024) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	beta 2 Adrenergic Receptor (ADRB2) (NM_000024) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	beta 2 Adrenergic Receptor
Synonyms:	ADRB2R; ADRBR; B2AR; BAR; BETA2AR
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC204499).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:           Sgf1         ORF         Mlu I
	GCG ATC GC ATG // NNN ACG CGT

ACCN: ORF Size: NM\_000024 1239 bp

	beta 2 Adrenergic Receptor (ADRB2) (NM_000024) Human Tagged Lenti ORF Clone – RC204499L3
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	<ul> <li>2. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 000024.3</u>
RefSeq Size:	2015 bp
RefSeq ORF:	1242 bp
Locus ID:	154
UniProt ID:	<u>P07550</u>
Cytogenetics:	5q32
Domains:	7tm_1
Protein Families:	Druggable Genome, GPCR, Transmembrane
Protein Pathways:	Calcium signaling pathway, Endocytosis, Neuroactive ligand-receptor interaction
MW:	46.4 kDa

#### Seta 2 Adrenergic Receptor (ADRB2) (NM\_000024) Human Tagged Lenti ORF Clone – RC204499L3

Gene Summary:This gene encodes beta-2-adrenergic receptor which is a member of the G protein-coupled<br/>receptor superfamily. This receptor is directly associated with one of its ultimate effectors, the<br/>class C L-type calcium channel Ca(V)1.2. This receptor-channel complex also contains a G<br/>protein, an adenylyl cyclase, cAMP-dependent kinase, and the counterbalancing phosphatase,<br/>PP2A. The assembly of the signaling complex provides a mechanism that ensures specific<br/>and rapid signaling by this G protein-coupled receptor. This receptor is also a transcription<br/>regulator of the alpha-synuclein gene, and together, both genes are believed to be associated<br/>with risk of Parkinson's Disease. This gene is intronless. Different polymorphic forms, point<br/>mutations, and/or downregulation of this gene are associated with nocturnal asthma, obesity,<br/>type 2 diabetes and cardiovascular disease. [provided by RefSeq, Oct 2019]
