## ITPK1 (NM\_014216) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: ITPK1 (NM 014216) Human Tagged ORF Clone Lentiviral Particle

Symbol: ITPK1
Synonyms: ITRPK1

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_014216 **ORF Size:** 1242 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC204537).

----

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 014216.3

 RefSeq Size:
 3385 bp

 RefSeq ORF:
 1245 bp

 Locus ID:
 3705

 UniProt ID:
 Q13572

Cytogenetics: 14q32.12

**Protein Families:** Druggable Genome

**Protein Pathways:** Inositol phosphate metabolism, Metabolic pathways, Phosphatidylinositol signaling system

ORIGENE

**MW:** 45.6 kDa

**Gene Summary:** This gene encodes an enzyme that belongs to the inositol 1,3,4-trisphosphate 5/6-kinase

family. This enzyme regulates the synthesis of inositol tetraphosphate, and downstream products, inositol pentakisphosphate and inositol hexakisphosphate. Inositol metabolism plays a role in the development of the neural tube. Disruptions in this gene are thought to be associated with neural tube defects. A pseudogene of this gene has been identified on

chromosome X. [provided by RefSeq, Jul 2016]
