## HEPC (HAMP) (NM\_021175) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Product Name: HEPC (HAMP) (NM\_021175) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: HEPC

Synonyms: HEPC; HFE2B; LEAP1; PLTR

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204620).

Sequence:

Restriction Sites: Sgfl-Mlul

Restriction Sites: Cloning Scheme:

<sup>\*</sup> The last codon before the Stop codon of the ORF

**ACCN:** NM\_021175

ORF Size: 252 bp

### HEPC (HAMP) (NM\_021175) Human Tagged Lenti ORF Clone - RC204620L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 021175.2</u>

 RefSeq Size:
 430 bp

 RefSeq ORF:
 255 bp

 Locus ID:
 57817

 UniProt ID:
 P81172

 Cytogenetics:
 19q13.12

**Protein Families:** Secreted Protein, Transmembrane

**MW:** 9.4 kDa

**Gene Summary:** The product encoded by this gene is involved in the maintenance of iron homeostasis, and it

is necessary for the regulation of iron storage in macrophages, and for intestinal iron

absorption. The preproprotein is post-translationally cleaved into mature peptides of 20, 22

and 25 amino acids, and these active peptides are rich in cysteines, which form

intramolecular bonds that stabilize their beta-sheet structures. These peptides exhibit

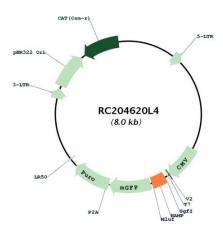

antimicrobial activity against bacteria and fungi. Mutations in this gene cause

hemochromatosis type 2B, also known as juvenile hemochromatosis, a disease caused by severe iron overload that results in cardiomyopathy, cirrhosis, and endocrine failure.
