FARSLB (FARSB) (NM_005687) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FARSLB (FARSB) (NM_005687) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: FARSLB

Synonyms: FARSLB; FRSB; HSPC173; NEDBLLA; PheHB; PheRS; RILDBC1

Mammalian Cell None

Selection:

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204639).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_005687

ORF Size: 1767 bp

FARSLB (FARSB) (NM_005687) Human Tagged Lenti ORF Clone - RC204639L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 005687.3</u>

RefSeq Size: 2233 bp
RefSeq ORF: 1770 bp
Locus ID: 10056
UniProt ID: Q9NSD9

Cytogenetics: 2q36.1

Domains: B3 4, B5

Protein Pathways: Aminoacyl-tRNA biosynthesis

MW: 66.1 kDa

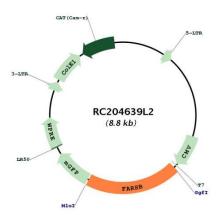

Gene Summary: This gene encodes a highly conserved enzyme that belongs to the aminoacyl-tRNA synthetase

class IIc subfamily. This enzyme comprises the regulatory beta subunits that form a tetramer with two catalytic alpha subunits. In the presence of ATP, this tetramer is responsible for attaching L-phenylalanine to the terminal adenosine of the appropriate tRNA. A pseudogene located on chromosome 10 has been identified. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, Jan 2015]
