Gene Summary:This gene encodes the skeletal muscle specific member of the calsequestrin protein family.
Calsequestrin functions as a luminal sarcoplasmic reticulum calcium sensor in both cardiac
and skeletal muscle cells. This protein, also known as calmitine, functions as a calcium
regulator in the mitochondria of skeletal muscle. This protein is absent in patients with
Duchenne and Becker types of muscular dystrophy. [provided by RefSeq, Jun 2013]
