Gene Summary:INSL4 encodes the insulin-like 4 protein, a member of the insulin superfamily. INSL4 encodes
a precursor that undergoes post-translational cleavage to produce 3 polypeptide chains, A-C,
that form tertiary structures composed of either all three chains, or just the A and B chains.
Expression of INSL4 products occurs within the early placental cytotrophoblast and
syncytiotrophoblast. [provided by RefSeq, Jul 2008]
