NAPSIN A (NAPSA) (NM_004851) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: NAPSIN A (NAPSA) (NM_004851) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: NAPSIN A

Synonyms: KAP; Kdap; NAP1; NAPA; SNAPA

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204715).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_004851

ORF Size: 1260 bp

NAPSIN A (NAPSA) (NM_004851) Human Tagged Lenti ORF Clone - RC204715L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004851.1</u>

RefSeq Size:1438 bpRefSeq ORF:1263 bpLocus ID:9476

 UniProt ID:
 O96009

 Cytogenetics:
 19q13.33

Protein Families: Druggable Genome, Protease

Protein Pathways: Lysosome MW: 45.4 kDa

Gene Summary: This gene encodes a member of the peptidase A1 family of aspartic proteases. The encoded

preproprotein is proteolytically processed to generate an activation peptide and the mature protease. The activation peptides of aspartic proteinases function as inhibitors of the

protease active site. These peptide segments, or pro-parts, are deemed important for correct folding, targeting, and control of the activation of aspartic proteinase zymogens. The encoded protease may play a role in the proteolytic processing of pulmonary surfactant protein B in the lung and may function in protein catabolism in the renal proximal tubules. This gene has been described as a marker for lung adenocarcinoma and renal cell carcinoma. [provided by

RefSeq, Feb 2016]
