Protein Pathways: Complement and coagulation cascades, Neuroactive ligand-receptor interaction

MW: 53.9 kDa

Gene Summary: C3a is an anaphylatoxin released during activation of the complement system. The protein encoded by this gene is an orphan G protein-coupled receptor for C3a. Binding of C3a by the encoded receptor activates chemotaxis, granule enzyme release, superoxide anion production, and bacterial opsonization. [provided by RefSeq, May 2016]
