OriGene Technologies, Inc.

SSB (NM_003142) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: SSB (NM_003142) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: SSB

Synonyms: La; La/SSB; LARP3

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC205013).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003142

ORF Size: 1224 bp

SSB (NM_003142) Human Tagged Lenti ORF Clone - RC205013L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003142.3</u>

RefSeq Size: 1719 bp
RefSeq ORF: 1227 bp
Locus ID: 6741

UniProt ID: P05455

Cytogenetics: 2q31.1

Domains: RRM, LA

Protein Families: Stem cell - Pluripotency, Transcription Factors

Protein Pathways: Systemic lupus erythematosus

MW: 46.8 kDa

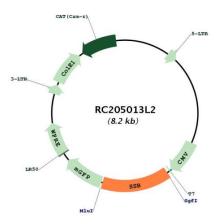

Gene Summary: The protein encoded by this gene is involved in diverse aspects of RNA metabolism, including

binding and protecting poly(U) termini of nascent RNA polymerase III transcripts from exonuclease digestion, processing 5' and 3' ends of pre-tRNA precursors, acting as an RNA chaperone, and binding viral RNAs associated with hepatitis C virus. Autoantibodies reacting with this protein are found in the sera of patients with Sjogren syndrome and systemic lupus erythematosus. Alternative promoter usage results in two different transcript variants which

encode the same protein. [provided by RefSeq, Jun 2014]
