## Viperin (RSAD2) (NM\_080657) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Viperin (RSAD2) (NM\_080657) Human Tagged ORF Clone Lentiviral Particle

Symbol: Viperin

Synonyms: cig5; cig33; vig1

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_080657 **ORF Size:** 1083 bp

**ORF Nucleotide** 

OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC205066).

Sequence:

1. . . . . . .

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

The molecular sequence of this clone aligns with the gene accession number as a point of

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 080657.4

 RefSeq Size:
 3512 bp

 RefSeq ORF:
 1086 bp

 Locus ID:
 91543

 UniProt ID:
 Q8WXG1

**Cytogenetics:** 2p25.2

**Domains:** Elp3, Radical\_SAM

MW: 42.2 kDa

## **Gene Summary:**

The protein encoded by this gene is an interferon-inducible antiviral protein that belongs to the S-adenosyl-L-methionine (SAM) superfamily of enzymes. The protein plays a role in cellular antiviral response and innate immune signaling. Antiviral effects result from inhibition of viral RNA replication, interference in the secretory pathway, binding to viral proteins and dysregulation of cellular lipid metabolism. The protein has been found to inhibit both DNA and RNA viruses, including influenza virus, human immunodeficiency virus (HIV-1) and Zika virus. [provided by RefSeq, Sep 2020]
