	LSM8 (NM_016200) Human Tagged ORF Clone Lentiviral Particle – RC205117L4V
MW:	10.4 kDa
Gene Summary:	This gene encodes a member of the like-Sm family of proteins. The encoded protein consists of a closed barrel shape, made up of five anti-parallel beta strands and an alpha helix. This protein partners with six paralogs to form a heteroheptameric ring which transiently binds U6 small nuclear RNAs and is involved in the general maturation of RNA in the nucleus.
