SOX8 (NM_014587) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: SOX8 (NM_014587) Human Tagged ORF Clone Lentiviral Particle

Symbol: SOX8

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

mGFP Tag:

ACCN: NM_014587

ORF Size: 1338 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC205121).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 014587.2

RefSeq Size: 3049 bp RefSeq ORF: 1341 bp Locus ID: 30812 **UniProt ID:** P57073 **Cytogenetics:** 16p13.3

Protein Families: Transcription Factors

47.3 kDa MW:

Gene Summary:

This gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional activator after forming a protein complex with other proteins. This protein may be involved in brain development and function. Haploinsufficiency for this protein may contribute to the cognitive disability found in an alpha-thalassemia-related syndrome (ART-16). This protein is also highly expressed in the majority of human hepatocellular carcinomas and promotes cellular proliferation and enhanced tumor growth. [provided by RefSeq, Jul 2017]
