KLF12 (NM_007249) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: KLF12 (NM_007249) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: KLF12

Synonyms: AP-2rep; AP2REP; HSPC122

Mammalian Cell None

Selection:

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/ml

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC205126).

Sgfl-Mlul

ORF Nucleotide Sequence:

Restriction Sites: Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_007249

ORF Size: 1206 bp

KLF12 (NM_007249) Human Tagged Lenti ORF Clone - RC205126L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 007249.4</u>

RefSeq Size: 10923 bp RefSeq ORF: 1209 bp

Locus ID: 11278

 UniProt ID:
 Q9Y4X4

 Cytogenetics:
 13q22.1

Domains: zf-C2H2

Protein Families: Transcription Factors

MW: 44.2 kDa

Gene Summary: Activator protein-2 alpha (AP-2 alpha) is a developmentally-regulated transcription factor and

important regulator of gene expression during vertebrate development and carcinogenesis. The protein encoded by this gene is a member of the Kruppel-like zinc finger protein family and can repress expression of the AP-2 alpha gene by binding to a specific site in the AP-2

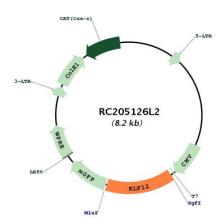

alpha gene promoter. Repression by the encoded protein requires binding with a

corepressor, CtBP1. Two transcript variants encoding different isoforms have been found for

this gene. [provided by RefSeq, Jul 2008]
