## Product datasheet for RC205188L2V

## PRMT8 (NM\_019854) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | PRMT8 (NM_019854) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                      | PRMT8   |
| Synonyms:                    | HRMT1L3; HRMT1L4  |
| Mammalian Cell<br>Selection: | None  |
| Vector:                      | pLenti-C-mGFP (PS100071)  |
| Tag:                         | mGFP  |
| ACCN:                        | NM_019854   |
| ORF Size:                    | 1182 bp   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC205188).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 019854.3</u>  |
| RefSeq Size:                 | 2417 bp   |
| RefSeq ORF:                  | 1185 bp   |
| Locus ID:                    | 56341   |
| UniProt ID:                  | <u>Q9NR22</u>   |
| Cytogenetics:                | 12p13.32  |
| Protein Families:            | Druggable Genome  |
| MW:                          | 45.3 kDa  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:Arginine methylation is a widespread posttranslational modification mediated by arginine<br/>methyltransferases, such as PRMT8. Arginine methylation is involved in a number of cellular<br/>processes, including DNA repair, RNA transcription, signal transduction, protein<br/>compartmentalization, and possibly protein translation (Lee et al., 2005 [PubMed 16051612]).<br/>[supplied by OMIM, Mar 2008]
