DPP8 (NM_197961) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: DPP8 (NM 197961) Human Tagged ORF Clone Lentiviral Particle

Symbol: DPP8

Synonyms: DP8; DPRP-1; DPRP1; MST097; MSTP097; MSTP135; MSTP141

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_197961 **ORF Size:** 2541 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC205236).

•

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 197961.2

 RefSeq Size:
 4079 bp

 RefSeq ORF:
 2544 bp

 Locus ID:
 54878

 UniProt ID:
 Q6V1X1

 Cytogenetics:
 15q22.31

Protein Families: Druggable Genome, Protease, Transmembrane

MW: 97.5 kDa

Gene Summary:

This gene encodes a member of the peptidase S9B family, a small family of dipeptidyl peptidases that are able to cleave peptide substrates at a prolyl bond. The encoded protein shares similarity with dipeptidyl peptidase IV in that it is ubiquitously expressed, and hydrolyzes the same substrates. These similarities suggest that, like dipeptidyl peptidase IV, this protein may play a role in T-cell activation and immune function. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq, Jul 2008]
