ALF (GTF2A1L) (NM_006872) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ALF (GTF2A1L) (NM_006872) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: ALF
Synonyms: ALF

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clo

Sequence:

The ORF insert of this clone is exactly the same as(RC205264).

Doctriction Citor

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_006872

ORF Size: 1434 bp

ALF (GTF2A1L) (NM_006872) Human Tagged Lenti ORF Clone - RC205264L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006872.2</u>

 RefSeq Size:
 1710 bp

 RefSeq ORF:
 1437 bp

 Locus ID:
 11036

 UniProt ID:
 Q9UNN4

Cytogenetics: 2p16.3

Protein Families: Transcription Factors

Protein Pathways: Basal transcription factors

MW: 52.4 kDa

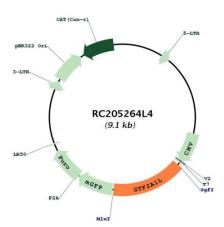

Gene Summary: The assembly and stability of the RNA polymerase II transcription pre-initiation complex on a

eukaryotic core promoter involve the effects of transcription factor IIA (TFIIA) on the interaction between TATA-binding protein (TBP) and DNA. This gene encodes a germ cell-specific counterpart of the large (alpha/beta) subunit of general transcription factor TFIIA that is able to stabilize the binding of TBP to DNA and may be uniquely important to testis biology. Alternative splicing for this locus has been observed and two variants, encoding distinct isoforms, have been identified. Co-transcription of this gene and the neighboring upstream gene generates a rare transcript (SALF), which encodes a fusion protein comprised of

sequence sharing identity with each individual gene product. [provided by RefSeq, Mar 2014]
