SCAMP1 (NM_004866) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: SCAMP1 (NM 004866) Human Tagged ORF Clone Lentiviral Particle

Symbol: SCAMP1

Synonyms: SCAMP; SCAMP37

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK
ACCN: NM_004866

ORF Size: 1014 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC205499).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 004866.4</u>

 RefSeq Size:
 6275 bp

 RefSeq ORF:
 1017 bp

 Locus ID:
 9522

 UniProt ID:
 015126

 Cytogenetics:
 5q14.1

Domains: SCAMP

Protein Families: Transmembrane

ORIGENE

MW: 37.9 kDa

Gene Summary:

This gene product belongs to the SCAMP family of proteins, which are secretory carrier membrane proteins. They function as carriers to the cell surface in post-golgi recycling pathways. Different family members are highly related products of distinct genes, and are usually expressed together. These findings suggest that these protein family members may function at the same site during vesicular transport rather than in separate pathways. A pseudogene of this gene has been defined on chromosome 1. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2014]
