Moesin (MSN) (NM_002444) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Moesin (MSN) (NM_002444) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Moesin

Synonyms: HEL70; IMD50

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC205674).

Sgfl-Mlul

Sequence:

cc.

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_002444

ORF Size: 1731 bp

Moesin (MSN) (NM_002444) Human Tagged Lenti ORF Clone - RC205674L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 002444.2</u>

RefSeq Size: 3981 bp
RefSeq ORF: 1734 bp
Locus ID: 4478

UniProt ID: P26038

Cytogenetics: Xq12

Domains: B41, ERM

Protein Families: Druggable Genome

Protein Pathways: Leukocyte transendothelial migration, Regulation of actin cytoskeleton

MW: 67.8 kDa

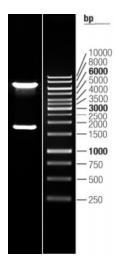

Gene Summary: Moesin (for membrane-organizing extension spike protein) is a member of the ERM family

which includes ezrin and radixin. ERM proteins appear to function as cross-linkers between plasma membranes and actin-based cytoskeletons. Moesin is localized to filopodia and other membranous protrusions that are important for cell-cell recognition and signaling and for cell

movement. [provided by RefSeg, Jul 2008]
