

# Product datasheet for RC205691L4

### PXR (NR1I2) (NM\_003889) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	PXR (NR1I2) (NM_003889) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	PXR
Synonyms:	BXR; ONR1; PAR; PAR1; PAR2; PARq; PRR; PXR; SAR; SXR
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC205691).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	<i>Sgf I</i> ORF <i>Mlu I</i> GCG ATC GCC ATG NNŇ ACG CGT

ACCN: ORF Size: NM\_003889 1299 bp

STRE PXR (NR112) (NM_003889) Human Tagged Lenti ORF Clone – RC205691L4	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metl	<ul> <li>hod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 003889.2</u>
RefSeq Size:	4446 bp
RefSeq ORF:	1305 bp
Locus ID:	8856
UniProt ID:	<u>075469</u>
Cytogenetics:	3q13.33
Domains:	HOLI, zf-C4
Protein Families:	Druggable Genome, Nuclear Hormone Receptor, Transcription Factors
MW:	49.6 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### STATES ORIGENE PXR (NR112) (NM\_003889) Human Tagged Lenti ORF Clone – RC205691L4

Gene Summary:This gene product belongs to the nuclear receptor superfamily, members of which are<br/>transcription factors characterized by a ligand-binding domain and a DNA-binding domain.<br/>The encoded protein is a transcriptional regulator of the cytochrome P450 gene CYP3A4,<br/>binding to the response element of the CYP3A4 promoter as a heterodimer with the 9-cis<br/>retinoic acid receptor RXR. It is activated by a range of compounds that induce CYP3A4,<br/>including dexamethasone and rifampicin. Several alternatively spliced transcripts encoding<br/>different isoforms, some of which use non-AUG (CUG) translation initiation codon, have been<br/>described for this gene. Additional transcript variants exist, however, they have not been fully<br/>characterized. [provided by RefSeq, Jul 2008]
