

# Product datasheet for RC205883L2

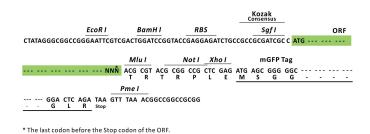

## NF2 (NM\_000268) Human Tagged Lenti ORF Clone

## **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	NF2 (NM_000268) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	NF2
Synonyms:	ACN; BANF; merlin-1; SCH
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC205883).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling: Sgf I ORF Mlu I GCG ATC GC ATG // NNŇ ACG CGT

ACCN: ORF Size:

NM\_000268 1785 bp

## **GRIGENE** NF2 (NM\_000268) Human Tagged Lenti ORF Clone – RC205883L2

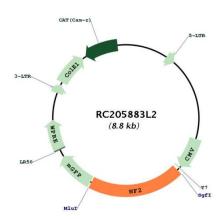

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
RefSeq:	<u>NM 000268.2</u>
RefSeq Size:	6046 bp
RefSeq ORF:	1788 bp
Locus ID:	4771
UniProt ID:	<u>P35240</u>
Cytogenetics:	22q12.2
Domains:	B41, ERM
Protein Families:	Druggable Genome
MW:	69.7 kDa

### Scherken Content and Content a

Gene Summary:This gene encodes a protein that is similar to some members of the ERM (ezrin, radixin,<br/>moesin) family of proteins that are thought to link cytoskeletal components with proteins in<br/>the cell membrane. This gene product has been shown to interact with cell-surface proteins,<br/>proteins involved in cytoskeletal dynamics and proteins involved in regulating ion transport.<br/>This gene is expressed at high levels during embryonic development; in adults, significant<br/>expression is found in Schwann cells, meningeal cells, lens and nerve. Mutations in this gene<br/>are associated with neurofibromatosis type II which is characterized by nervous system and<br/>skin tumors and ocular abnormalities. Two predominant isoforms and a number of minor<br/>isoforms are produced by alternatively spliced transcripts. [provided by RefSeq, Jul 2008]
