## HMG1 (HMGB1) (NM\_002128) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: HMG1 (HMGB1) (NM 002128) Human Tagged ORF Clone Lentiviral Particle

Symbol: HMG1

Synonyms: HMG-1; HMG1; HMG3; SBP-1

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 002128

ORF Size: 645 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC205918).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 002128.4

 RefSeq Size:
 3428 bp

 RefSeq ORF:
 648 bp

 Locus ID:
 3146

 UniProt ID:
 P09429

 Cytogenetics:
 13q12.3

 Domains:
 HMG

**Protein Families:** Druggable Genome, Stem cell - Pluripotency, Transcription Factors

**Protein Pathways:** Base excision repair

MW: 24.9 kDa

**Gene Summary:** This gene encodes a protein that belongs to the High Mobility Group-box superfamily. The

encoded non-histone, nuclear DNA-binding protein regulates transcription, and is involved in

organization of DNA. This protein plays a role in several cellular processes, including

inflammation, cell differentiation and tumor cell migration. Multiple pseudogenes of this gene have been identified. Alternative splicing results in multiple transcript variants that encode

the same protein. [provided by RefSeq, Sep 2015]
