## BIRC5 (NM\_001168) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** BIRC5 (NM\_001168) Human Tagged ORF Clone Lentiviral Particle

Symbol: BIRC5

Synonyms: API4; EPR-1

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_001168

ORF Size: 426 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC205935).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 001168.2</u>

RefSeq Size: 2655 bp

**RefSeq ORF:** 429 bp

Locus ID: 332

UniProt ID: <u>015392</u>

Cytogenetics: 17q25.3

Domains: BIR

**Protein Families:** Druggable Genome, Stem cell - Pluripotency

## BIRC5 (NM\_001168) Human Tagged ORF Clone Lentiviral Particle - RC205935L2V

**Protein Pathways:** Colorectal cancer, Pathways in cancer

**MW:** 16.2 kDa

**Gene Summary:** This gene is a member of the inhibitor of apoptosis (IAP) gene family, which encode negative

regulatory proteins that prevent apoptotic cell death. IAP family members usually contain multiple baculovirus IAP repeat (BIR) domains, but this gene encodes proteins with only a single BIR domain. The encoded proteins also lack a C-terminus RING finger domain. Gene expression is high during fetal development and in most tumors, yet low in adult tissues. Alternatively spliced transcript variants encoding distinct isoforms have been found for this

gene. [provided by RefSeq, Jun 2011]
