

Product datasheet for RC205981L4

NFYA (NM_021705) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: NFYA (NM_021705) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: NFYA

Synonyms: CBF-A; CBF-B; HAP2; NF-YA

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC205981).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_021705

ORF Size: 954 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

NFYA (NM_021705) Human Tagged Lenti ORF Clone - RC205981L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 021705.2</u>

RefSeq Size: 6149 bp
RefSeq ORF: 957 bp
Locus ID: 4800

 UniProt ID:
 P23511

 Cytogenetics:
 6p21.1

Domains: CBF

Protein Families: Transcription Factors

Protein Pathways: Antigen processing and presentation

MW: 33.9 kDa

Gene Summary: The protein encoded by this gene is one subunit of a trimeric complex, forming a highly

conserved transcription factor that binds to CCAAT motifs in the promoter regions in a variety of genes. Subunit A associates with a tight dimer composed of the B and C subunits, resulting

in a trimer that binds to DNA with high specificity and affinity. The sequence specific interactions of the complex are made by the A subunit, suggesting a role as the regulatory subunit. In addition, there is evidence of post-transcriptional regulation in this gene product, either by protein degradation or control of translation. Further regulation is represented by alternative splicing in the glutamine-rich activation domain, with clear tissue-specific

preferences for the two isoforms. [provided by RefSeq, Jul 2008]
