beta COP (COPB1) (NM 016451) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: beta COP (COPB1) (NM_016451) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: beta COP

Synonyms: BARMACS; COPB

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC206009).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_016451

ORF Size: 2859 bp

beta COP (COPB1) (NM_016451) Human Tagged Lenti ORF Clone - RC206009L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 016451.3</u>

RefSeq Size:3490 bpRefSeq ORF:2862 bpLocus ID:1315

UniProt ID: P53618
Cytogenetics: 11p15.2

Domains: Adaptin_N MW: 107.1 kDa

Gene Summary: This gene encodes a protein subunit of the coatomer complex associated with non-clathrin

coated vesicles. The coatomer complex, also known as the coat protein complex 1, forms in the cytoplasm and is recruited to the Golgi by activated guanosine triphosphatases. Once at the Golgi membrane, the coatomer complex may assist in the movement of protein and lipid components back to the endoplasmic reticulum. Alternatively spliced transcript variants have

been described. [provided by RefSeq, Jan 2009]
