## PIGF (NM\_173074) Human Tagged ORF Clone Lentiviral Particle

#### **Product data:**

Product Type: Lentiviral Particles

**Product Name:** PIGF (NM\_173074) Human Tagged ORF Clone Lentiviral Particle

Symbol: PIGF Synonyms: OORS

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_173074

ORF Size: 618 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC206054).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 173074.1</u>

 RefSeq Size:
 1083 bp

 RefSeq ORF:
 621 bp

 Locus ID:
 5281

 UniProt ID:
 Q07326

**Cytogenetics:** 2p21

**Protein Families:** Transmembrane

**Protein Pathways:** Glycosylphosphatidylinositol(GPI)-anchor biosynthesis, Metabolic pathways

### PIGF (NM\_173074) Human Tagged ORF Clone Lentiviral Particle - RC206054L4V

**MW:** 23.2 kDa

Gene Summary: This gene encodes a protein involved in glycosylphosphatidylinositol (GPI)-anchor

biosynthesis. The GPI-anchor, a glycolipid containing three mannose molecules in its core backbone, is found on many blood cells where it serves to anchor proteins to the cell surface. The encoded protein and another GPI synthesis protein, PIGO, function in the transfer of ethanolaminephosphate to the third mannose in GPI. Alternatively spliced transcript variants

encoding different isoforms have been described. [provided by RefSeq, Jul 2008]
