Gene Summary:This gene encodes a member of the DNA mismatch repair mutS family. This member is a<br/>meiosis-specific protein that is not involved in DNA mismatch correction, but is required for<br/>reciprocal recombination and proper segregation of homologous chromosomes at meiosis I.<br/>This protein and MSH5 form a heterodimer which binds uniquely to a Holliday Junction and<br/>its developmental progenitor, thus provoking ADP-ATP exchange, and stabilizing the<br/>interaction between parental chromosomes during meiosis double-stranded break repair.<br/>[provided by RefSeq, Aug 2011]
