Product data:

Product Type: Expression Plasmids

Product Name: EGLN2 (NM_053046) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: EGLN2

Synonyms: EIT-6; EIT6; HIF-PH1; HIFPH1; HPH-1; HPH-3; PHD1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC206152).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_053046

ORF Size: 1221 bp

EGLN2 (NM_053046) Human Tagged Lenti ORF Clone - RC206152L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 053046.2</u>

 RefSeq Size:
 2264 bp

 RefSeq ORF:
 1224 bp

 Locus ID:
 112398

 UniProt ID:
 Q96KS0

Cytogenetics:

Protein Families: Druggable Genome

Protein Pathways: Pathways in cancer, Renal cell carcinoma

19q13.2

MW: 43.7 kDa

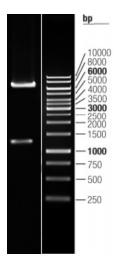

Gene Summary: The hypoxia inducible factor (HIF) is a transcriptional complex that is involved in oxygen

homeostasis. At normal oxygen levels, the alpha subunit of HIF is targeted for degration by prolyl hydroxylation. This gene encodes an enzyme responsible for this post-translational modification. Alternative splicing results in multiple transcript variants. Read-through transcription also exists between this gene and the upstream RAB4B (RAB4B, member RAS

oncogene family) gene. [provided by RefSeq, Feb 2011]
