| Product Type:                | Expression Plasmids   |
|------------------------------|---|
| Product Name:                | ARF3 (NM_001659) Human Tagged Lenti ORF Clone   |
| Tag:                         | Myc-DDK   |
| Symbol:                      | ARF3  |
| Mammalian Cell<br>Selection: | None  |
| Vector:                      | pLenti-C-Myc-DDK (PS100064)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC206192).                            |
| <b>Restriction Sites:</b>    | Sgfl-Mlul   |
| Cloning Scheme:              |   |
|                              | Cloning sites used for ORF Shuttling:<br>Sgf 1 ORF Mlu I<br>GCG ATC GC ATG // NNÑ ACG CGT |
|                              | <u>Kozak</u><br><u>Consensus</u><br>EcoR I BamH I <u>RBS</u> <u>Sgf I</u> ORF             |
|                              | CTATAGGGCGGCCGGGAATTCGTCGACTGGATCCGGTACCGAGGAGATCTGCCGCCGCGATCGC C                        |

\* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM\_001659 543 bp

| <b>GRIGENE</b> ARF3 (NM_001659) Human Tagged Lenti ORF Clone – RC206192L1 |   |
|---|---|
| OTI Disclaimer:   | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.   |
|   | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:   | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:   | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:  | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:   | <u>NM 001659.1</u>  |
| RefSeq Size:  | 3556 bp   |
| RefSeq ORF:   | 546 bp  |
| Locus ID:   | 377   |
| UniProt ID:   | <u>P61204</u>   |
| Cytogenetics:   | 12q13.12  |
| Domains:  | RAB, SAR, ARF, arf  |
| MW:   | 20.6 kDa  |
| Gene Summary:   | ADP-ribosylation factor 3 (ARF3) is a member of the human ARF gene family. These genes<br>encode small guanine nucleotide-binding proteins that stimulate the ADP-ribosyltransferase<br>activity of cholera toxin and play a role in vesicular trafficking and as activators of<br>phospholipase D. The gene products include 6 ARF proteins and 11 ARF-like proteins and<br>constitute 1 family of the RAS superfamily. The ARF proteins are categorized as class I (ARF1,<br>ARF2,and ARF3), class II (ARF4 and ARF5) and class III (ARF6) and members of each class share<br>a common gene organization. The ARF3 gene contains five exons and four introns. [provided<br>by Paffage Jul 2008] |
