OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Met	 centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

SAB33B (NM_031296) Human Tagged Lenti ORF Clone – RC206242L1

Gene Summary:This gene encodes a small GTP-binding protein of the Rab GTPase family, whose members
function in vesicle transport during protein secretion and endocytosis. Rab GTPases are
active, membrane-associated proteins that recruit effector proteins in the GTP-bound state
and inactive cytosolic proteins when in a GDP-bound state. The protein encoded by this gene
is ubiquitously expressed and has been implicated in Golgi to endoplasmic reticulum cycling
of Golgi enzymes. In addition, this protein regulates Golgi homeostasis and coordinates intra-
Golgi retrograde trafficking. Allelic variants in this gene have been associated with Dyggve-
Melchior-Clausen syndrome and Smith-McCort dysplasia 2, which are autosomal recessive
spondyloepimetaphyseal dysplasias characterized by skeletal abnormalities. [provided by
