

Product datasheet for RC206277L4

PHYH (NM_006214) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PHYH (NM_006214) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: PHYH

Synonyms: LN1; LNAP1; PAHX; PHYH1; RD

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC206277).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_006214

ORF Size: 1014 bp

PHYH (NM_006214) Human Tagged Lenti ORF Clone - RC206277L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006214.3</u>, <u>NP 006205.1</u>

RefSeq Size:1620 bpRefSeq ORF:1017 bpLocus ID:5264

UniProt ID: <u>O14832</u> Cytogenetics: 10p13

Protein Families: Druggable Genome

MW: 38.5 kDa

Gene Summary: This gene is a member of the PhyH family and encodes a peroxisomal protein that is involved

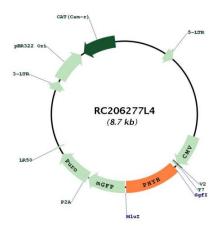

in the alpha-oxidation of 3-methyl branched fatty acids. Specifically, this protein converts phytanoyl-CoA to 2-hydroxyphytanoyl-CoA. Mutations in this gene have been associated with Refsum disease (RD) and deficient protein activity has been associated with Zellweger

syndrome and rhizomelic chondrodysplasia punctata. Alternate transcriptional splice

variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]
