Ceramide glucosyltransferase (UGCG) (NM_003358) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Ceramide glucosyltransferase (UGCG) (NM_003358) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Ceramide glucosyltransferase

Synonyms: GCS; GLCT1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

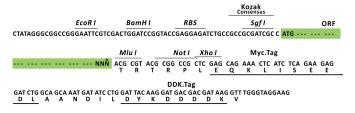

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC206288).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003358

ORF Size: 1182 bp

Ceramide glucosyltransferase (UGCG) (NM_003358) Human Tagged Lenti ORF Clone – RC206288L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003358.1</u>

RefSeq Size: 1637 bp
RefSeq ORF: 1185 bp
Locus ID: 7357

UniProt ID: Q16739
Cytogenetics: 9q31.3

Domains: Glycos_transf_2
Protein Families: Transmembrane

Protein Pathways: Metabolic pathways, Sphingolipid metabolism

MW: 44.9 kDa

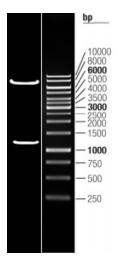

Gene Summary: This gene encodes an enzyme that catalyzes the first glycosylation step in the biosynthesis of

glycosphingolipids, which are membrane components containing lipid and sugar moieties. The product of this reaction is glucosylceramide, which is the core structure of many

glycosphingolipids. [provided by RefSeq, Dec 2014]
