Fuc-TIX (FUT9) (NM_006581) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Fuc-TIX (FUT9) (NM 006581) Human Tagged Lenti ORF Clone

Tag:mGFPSymbol:Fuc-TIXSynonyms:Fuc-TIX

Mammalian Cell

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

None

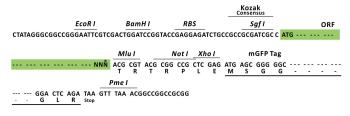

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC206322).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_006581

ORF Size: 1077 bp

Fuc-TIX (FUT9) (NM_006581) Human Tagged Lenti ORF Clone - RC206322L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

Transmembrane

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006581.2</u>

RefSeq Size: 12815 bp
RefSeq ORF: 1080 bp
Locus ID: 10690

UniProt ID: Q9Y231

Cytogenetics: 6q16.1

Domains: Glyco_transf_10

Protein Pathways: Glycosphingolipid biosynthesis - globo series, Glycosphingolipid biosynthesis - lacto and

neolacto series, Metabolic pathways

MW: 42 kDa

Protein Families:

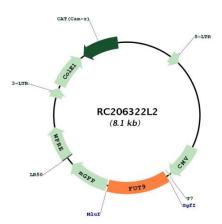

Gene Summary: The protein encoded by this gene belongs to the glycosyltransferase family. It is localized to

the golgi, and catalyzes the last step in the biosynthesis of Lewis X (LeX) antigen, the addition of a fucose to precursor polysaccharides. This protein is one of the few fucosyltransferases that synthesizes the LeX oligosaccharide (CD15) expressed in the organ buds progressing in mesenchyma during embryogenesis. It is also responsible for the expression of CD15 in mature granulocytes. A common haplotype of this gene has also been associated with

susceptibility to placental malaria infection. [provided by RefSeq, Nov 2011]
