

Product datasheet for **RC206429L2V**

CD16 (FCGR3A) (NM_000569) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|--|
| Product Type: | Lentiviral Particles |
| Product Name: | CD16 (FCGR3A) (NM_000569) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | CD16 |
| Synonyms: | CD16; CD16A; FCG3; FCGR3; FCGR111; FCR-10; FCR111; FCR111A; IGFR3; IMD20 |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-mGFP (PS100071) |
| Tag: | mGFP |
| ACCN: | NM_000569 |
| ORF Size: | 870 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC206429). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_000569.6 |
| RefSeq Size: | 2406 bp |
| RefSeq ORF: | 765 bp |
| Locus ID: | 2214 |
| UniProt ID: | P08637 |
| Cytogenetics: | 1q23.3 |
| Domains: | ig, IG |
| Protein Families: | ES Cell Differentiation/IPS, Secreted Protein, Transmembrane |

|--------------------------|--|
| Protein Pathways: | Fc gamma R-mediated phagocytosis, Natural killer cell mediated cytotoxicity, Systemic lupus erythematosus |
| MW: | 32.64 kDa |
| Gene Summary: | <p>This gene encodes a receptor for the Fc portion of immunoglobulin G, and it is involved in the removal of antigen-antibody complexes from the circulation, as well as other responses, including antibody dependent cellular mediated cytotoxicity and antibody dependent enhancement of virus infections. This gene (FCGR3A) is highly similar to another nearby gene (FCGR3B) located on chromosome 1. The receptor encoded by this gene is expressed on natural killer (NK) cells as an integral membrane glycoprotein anchored through a transmembrane peptide, whereas FCGR3B is expressed on polymorphonuclear neutrophils (PMN) where the receptor is anchored through a phosphatidylinositol (PI) linkage. Mutations in this gene are associated with immunodeficiency 20, and have been linked to susceptibility to recurrent viral infections, susceptibility to systemic lupus erythematosus, and alloimmune neonatal neutropenia. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2020]</p> |
