

## **Product datasheet for RC206437L1**

# MX2 (NM\_002463) Human Tagged Lenti ORF Clone

### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** MX2 (NM\_002463) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: MX2
Synonyms: MXB

Mammalian Cell Selection:

None

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC206437).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

st The last codon before the Stop codon of the ORF.

**ACCN:** NM\_002463

ORF Size: 2145 bp

**OriGene Technologies, Inc.** 9620 Medical Center Drive, Ste 200

#### **OTI Disclaimer:**

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <a href="mailto:customercom">customercom</a> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

**OTI Annotation:** 

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components:

Cytogenetics:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

**RefSeq:** NM 002463.1

 RefSeq Size:
 2961 bp

 RefSeq ORF:
 2148 bp

 Locus ID:
 4600

 UniProt ID:
 P20592

**Domains:** dynamin\_2, dynamin, GED

21q22.3

**Protein Families:** Druggable Genome

MW: 82.1 kDa

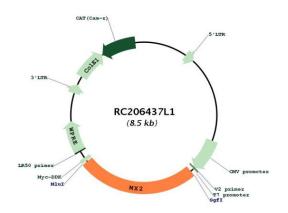

**Gene Summary:** The protein encoded by this gene has a nuclear and a cytoplasmic form and is a member of

both the dynamin family and the family of large GTPases. The nuclear form is localized in a granular pattern in the heterochromatin region beneath the nuclear envelope. A nuclear localization signal (NLS) is present at the amino terminal end of the nuclear form but is lacking in the cytoplasmic form due to use of an alternate translation start codon. This protein is upregulated by interferon-alpha but does not contain the antiviral activity of a

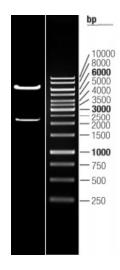

similar myxovirus resistance protein 1. [provided by RefSeq, Jul 2008]
