SLC26A3 (NM 000111) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: SLC26A3 (NM_000111) Human Tagged ORF Clone Lentiviral Particle

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Symbol: SLC26A3 CLD: DRA Synonyms: Puromycin

Mammalian Cell

Selection:

Tag: Myc-DDK NM 000111 ACCN: **ORF Size:** 2292 bp

ORF Nucleotide

OTI Disclaimer:

Sequence:

Vector:

The ORF insert of this clone is exactly the same as(RC206559).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 000111.1, NP 000102.1

RefSeq Size: 2894 bp RefSeq ORF: 2295 bp Locus ID: 1811 **UniProt ID:** P40879

Cytogenetics: 7q22.3-q31.1

Protein Families: Druggable Genome, Transcription Factors, Transmembrane

84.5 kDa MW:

Gene Summary:

The protein encoded by this gene is a transmembrane glycoprotein that transports chloride ions across the cell membrane in exchange for bicarbonate ions. It is localized to the mucosa of the lower intestinal tract, particularly to the apical membrane of columnar epithelium and some goblet cells. The protein is essential for intestinal chloride absorption, and mutations in this gene have been associated with congenital chloride diarrhea. [provided by RefSeq, Oct 2008]
