## Product datasheet for RC206559L4

## SLC26A3 (NM_000111) Human Tagged Lenti ORF Clone

## Product data:

Product Type: Expression Plasmids
Product Name:
Tag:
Symbol:
Synonyms:
Mammalian Cell
Selection:
Vector:
E. coli Selection:

ORF Nucleotide
Sequence:
Restriction Sites:
Cloning Scheme:
SLC26A3 (NM_000111) Human Tagged Lenti ORF Clone
mGFP
SLC26A3
CLD; DRA
Puromycin
pLenti-C-mGFP-P2A-Puro (PS100093)
Chloramphenicol ( $34 \mathrm{ug} / \mathrm{mL}$ )
The ORF insert of this clone is exactly the same as(RC206559).

Sgfl-Mlul

CN: techsupport@origene.cn

Cloning sites used for ORF Shuttling:

----- GGA CTC AGA GIT TGG GTA GGA AGC

* The last codon before the Stop codon of the ORF.

ACCN:
ORF Size:

NM_000111
2292 bp

## OTI Disclaimer:

## OTI Annotation:

## Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

 containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).Reconstitution Method: 1. Centrifuge at $5,000 \times \mathrm{g}$ for 5 min .
2. Carefully open the tube and add 100 ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000 xg ) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at $-20^{\circ} \mathrm{C}$. The DNA is stable for at least one year from date of shipping when stored at $-20^{\circ} \mathrm{C}$.

## RefSeq:

RefSeq Size:
NM 000111.1 NP 000102.1
2894 bp
RefSeq ORF: 2295 bp
Locus ID: 1811
UniProt ID: $\quad$ P40879
Cytogenetics:
Protein Families:
MW:
Gene Summary:
The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

| Gene Summary: | The protein encoded by this gene is a transmembrane glycoprotein that transports chloride ions across the cell membrane in exchange for bicarbonate ions. It is localized to the mucosa of the lower intestinal tract, particularly to the apical membrane of columnar epithelium and some goblet cells. The protein is essential for intestinal chloride absorption, and mutations in this gene have been associated with congenital chloride diarrhea. [provided by RefSeq, Oct 2008] |
