Apolipoprotein CIII (APOC3) (NM_000040) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Apolipoprotein CIII (APOC3) (NM_000040) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Apolipoprotein CIII

Synonyms: APOCIII

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clo

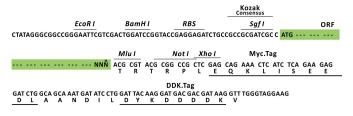

Sequence:

The ORF insert of this clone is exactly the same as(RC206566).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000040

ORF Size: 297 bp

Apolipoprotein CIII (APOC3) (NM_000040) Human Tagged Lenti ORF Clone - RC206566L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000040.1</u>

RefSeq Size:533 bpRefSeq ORF:300 bpLocus ID:345

UniProt ID: P02656
Cytogenetics: 11q23.3

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: PPAR signaling pathway

MW: 10.9 kDa

Gene Summary: This gene encodes a protein component of triglyceride (TG)-rich lipoproteins (TRLs) including

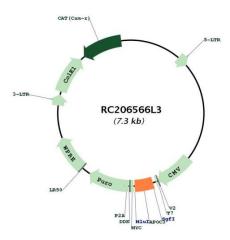

very low density lipoproteins (VLDL), high density lipoproteins (HDL) and chylomicrons. The encoded protein plays a role in role in the metabolism of these TRLs through multiple modes. This protein has been shown to promote the secretion of VLDL1, inhibit lipoprotein lipase enzyme activity, and delay catabolism of TRL remnants. Mutations in this gene are associated with low plasma triglyceride levels and reduced risk of ischemic cardiovascular disease, and

hyperalphalipoproteinemia, which is characterized by elevated levels of high density

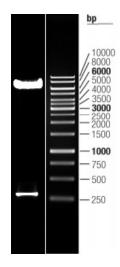

lipoprotein (HDL) and HDL cholesterol in human patients. This gene and other related genes comprise an apolipoprotein gene cluster on chromosome 11. [provided by RefSeq, Sep 2017]
