ORIGENE PDE1B (NM_000924) Human Tagged ORF Clone Lentiviral Particle – RC206588L4V	
Protein Pathways	Calcium signaling pathway, Progesterone-mediated oocyte maturation, Purine metabolism
MW:	61.4 kDa
Gene Summary:	The protein encoded by this gene belongs to the cyclic nucleotide phosphodiesterase (PDE) family, and PDE1 subfamily. Members of the PDE1 family are calmodulin-dependent PDEs that are stimulated by a calcium-calmodulin complex. This PDE has dual-specificity for the second messengers, cAMP and cGMP, with a preference for cGMP as a substrate. cAMP and cGMP function as key regulators of many important physiological processes. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Jul 2011]
