CDS2 (NM_003818) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CDS2 (NM 003818) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CDS2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clo

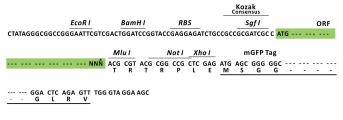

Sequence:

The ORF insert of this clone is exactly the same as(RC206807).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

* The last codon before the Stop codon of the ORF.

ACCN: NM_003818 **ORF Size:** 1335 bp

CDS2 (NM_003818) Human Tagged Lenti ORF Clone - RC206807L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003818.2</u>

RefSeq Size:9323 bpRefSeq ORF:1338 bp

Locus ID: 8760 **UniProt ID:** 095674

Cytogenetics: 20p12.3

Domains: CTP_transf_1

Protein Families: Transmembrane

Protein Pathways: Glycerophospholipid metabolism, Metabolic pathways, Phosphatidylinositol signaling system

MW: 51.4 kDa

Gene Summary: Breakdown products of phosphoinositides are ubiquitous second messengers that function

downstream of many G protein-coupled receptors and tyrosine kinases regulating cell growth,

calcium metabolism, and protein kinase C activity. This gene encodes an enzyme which regulates the amount of phosphatidylinositol available for signaling by catalyzing the conversion of phosphatidic acid to CDP-diacylglycerol. This enzyme is an integral membrane

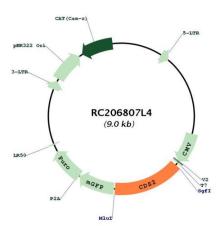

protein localized to two subcellular domains, the matrix side of the inner mitochondrial

membrane where it is thought to be involved in the synthesis of phosphatidylglycerol and cardiolipin and the cytoplasmic side of the endoplasmic reticulum where it functions in phosphatidylinositol biosynthesis. Two genes encoding this enzyme have been identified in humans, one mapping to human chromosome 4q21 and a second to 20p13. [provided by

RefSeq, Jul 2008]
