Cytokeratin 5 (KRT5) (NM_000424) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cytokeratin 5 (KRT5) (NM_000424) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Cytokeratin 5

CK5; DDD; DDD1; EBS2; K5; KRT5A Synonyms: None

Mammalian Cell

Selection:

Vector: pLenti-C-Myc-DDK (PS100064)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

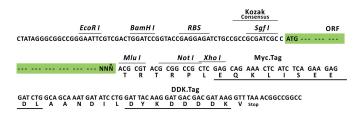

The ORF insert of this clone is exactly the same as(RC206870).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000424

ORF Size: 1770 bp

Cytokeratin 5 (KRT5) (NM_000424) Human Tagged Lenti ORF Clone - RC206870L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000424.3</u>

RefSeq Size: 2320 bp RefSeq ORF: 1773 bp

Locus ID: 3852

UniProt ID: P13647

Cytogenetics: 12q13.13

Domains: filament

MW: 62.4 kDa

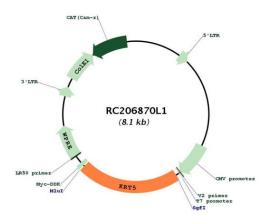

Gene Summary: The protein encoded by this gene is a member of the keratin gene family. The type II

cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues. This type II cytokeratin is specifically expressed in the basal layer of the epidermis with family member KRT14. Mutations in these genes have been associated with a complex of diseases termed epidermolysis bullosa simplex. The type II cytokeratins are clustered in a region of

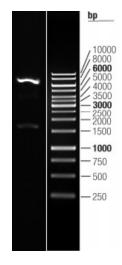

chromosome 12q12-q13. [provided by RefSeq, Jul 2008]
