MSL3L1 (MSL3) (NM_078629) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MSL3L1 (MSL3) (NM 078629) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: MSL3L1

Synonyms: MRSXBA; MRXS36; MRXSBA; MSL3L1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC206888).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_078629

ORF Size: 1563 bp

MSL3L1 (MSL3) (NM_078629) Human Tagged Lenti ORF Clone - RC206888L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 078629.1

 RefSeq Size:
 2359 bp

 RefSeq ORF:
 1566 bp

 Locus ID:
 10943

 UniProt ID:
 Q8N5Y2

Cytogenetics: Xp22.2

Domains:

Protein Families: Transcription Factors

CHROMO

MW: 59.8 kDa

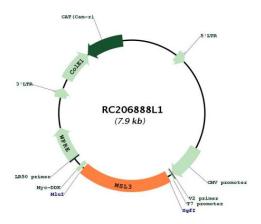

Gene Summary: This gene encodes a nuclear protein that is similar to the product of the Drosophila male-

specific lethal-3 gene. The Drosophila protein plays a critical role in a dosage-compensation pathway, which equalizes X-linked gene expression in males and females. Thus, the human protein is thought to play a similar function in chromatin remodeling and transcriptional regulation, and it has been found as part of a complex that is responsible for histone H4 lysine-16 acetylation. This gene can undergo X inactivation. Alternative splicing results in multiple transcript variants. Related pseudogenes have been identified on chromosomes 2, 7

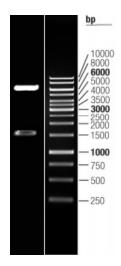

and 8. [provided by RefSeq, Jul 2010]
