Cullin 4B (CUL4B) (NM_003588) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Cullin 4B (CUL4B) (NM_003588) Human Tagged ORF Clone Lentiviral Particle

Symbol: Cullin 4B

Synonyms: CUL-4B; MRXHF2; MRXS15; MRXSC; SFM2

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_003588 **ORF Size:** 2739 bp

ORF Nucleotide

Sequence:

Domains:

The ORF insert of this clone is exactly the same as (RC206935).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 003588.2, NP 003579.2

CULLIN

 RefSeq Size:
 5365 bp

 RefSeq ORF:
 2742 bp

 Locus ID:
 8450

 UniProt ID:
 Q13620

 Cytogenetics:
 Xq24

Protein Pathways: Nucleotide excision repair, Ubiquitin mediated proteolysis

MW: 104 kDa

Gene Summary: This gene is a member of the cullin family. The encoded protein forms a complex that

functions as an E3 ubiquitin ligase and catalyzes the polyubiquitination of specific protein substrates in the cell. The protein interacts with a ring finger protein, and is required for the proteolysis of several regulators of DNA replication including chromatin licensing and DNA replication factor 1 and cyclin E. Multiple transcript variants encoding different isoforms have

been found for this gene. [provided by RefSeq, Jul 2008]
