Product datasheet for RC207013L2V

BUB1 (NM_004336) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	BUB1 (NM_004336) Human Tagged ORF Clone Lentiviral Particle
Symbol:	BUB1
Synonyms:	BUB1A; BUB1L; hBUB1
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
Tag:	mGFP
ACCN:	NM_004336
ORF Size:	3255 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC207013).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 004336.2</u>
RefSeq Size:	3636 bp
RefSeq ORF:	3258 bp
Locus ID:	699
UniProt ID:	<u>O43683</u>
Cytogenetics:	2q13
Domains:	pkinase, S_TKc
Protein Families:	Druggable Genome, Protein Kinase

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	BUB1 (NM_004336) Human Tagged ORF Clone Lentiviral Particle – RC207013L2V
Protein Pathway	Cell cycle, Oocyte meiosis, Progesterone-mediated oocyte maturation
MW:	122.4 kDa
Gene Summary:	This gene encodes a serine/threonine-protein kinase that play a central role in mitosis. The encoded protein functions in part by phosphorylating members of the mitotic checkpoint complex and activating the spindle checkpoint. This protein also plays a role in inhibiting the activation of the anaphase promoting complex/cyclosome. This protein may also function in the DNA damage response. Mutations in this gene have been associated with aneuploidy and several forms of cancer. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013]
