## OSGEP (NM\_017807) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** OSGEP (NM\_017807) Human Tagged ORF Clone Lentiviral Particle

Symbol: OSGEP

Synonyms: GAMOS3; GCPL1; KAE1; OSGEP1; PRSMG1; TCS3

**Mammalian Cell** 

Selection:

ACCN:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK

ORF Size: 1005 bp

**ORF Nucleotide** 

OTI Disclaimer:

\_\_\_\_\_

NM 017807

Sequence:

The ORF insert of this clone is exactly the same as(RC207089).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 017807.2

 RefSeq Size:
 1642 bp

 RefSeq ORF:
 1008 bp

 Locus ID:
 55644

 UniProt ID:
 Q9NPF4

 Cytogenetics:
 14q11.2

**Domains:** Peptidase\_M22

**Protein Families:** Druggable Genome, Protease

## OSGEP (NM\_017807) Human Tagged ORF Clone Lentiviral Particle - RC207089L1V

MW: 36.4 kDa

**Gene Summary:** Component of the EKC/KEOPS complex that is required for the formation of a

threonylcarbamoyl group on adenosine at position 37 (t(6)A37) in tRNAs that read codons

beginning with adenine. The complex is probably involved in the transfer of the

threonylcarbamoyl moiety of threonylcarbamoyl-AMP (TC-AMP) to the N6 group of A37. OSGEP likely plays a direct catalytic role in this reaction, but requires other protein(s) of the

complex to fulfill this activity.[UniProtKB/Swiss-Prot Function]
