Gene Summary:This gene encodes a member of the sorting nexin family. Members of this family contain a<br/>phox (PX) domain, which is a phosphoinositide binding domain, and are involved in<br/>intracellular trafficking. The protein encoded by this gene associates with late endosome<br/>membranes as is involved in tubule formation, cholesterol transport, and transport of<br/>tetraspanin CD81. The encoded protein also inhibits cell migration and tumorigenesis.<br/>[provided by RefSeq, Jan 2017]
