EEF2K (NM_013302) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: EEF2K (NM_013302) Human Tagged ORF Clone Lentiviral Particle

Symbol: EEF2K

Synonyms: CaMKIII; eEF-2K; HSU93850

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_013302 **ORF Size:** 2175 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC207496).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 013302.3

 RefSeq Size:
 7412 bp

 RefSeq ORF:
 2178 bp

 Locus ID:
 29904

 UniProt ID:
 000418

 Cytogenetics:
 16p12.2

Domains: Alpha_kinase

Protein Families: Druggable Genome, Protein Kinase

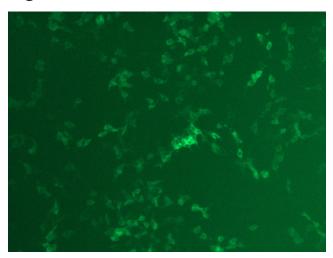

MW: 82.2 kDa

Gene Summary: This gene encodes a highly conserved protein kinase in the calmodulin-mediated signaling

pathway that links activation of cell surface receptors to cell division. This kinase is involved in the regulation of protein synthesis. It phosphorylates eukaryotic elongation factor 2 (EEF2) and thus inhibits the EEF2 function. The activity of this kinase is increased in many cancers and may be a valid target for anti-cancer treatment. [provided by RefSeq, Jul 2008]

Product images:

[RC207496L2] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC207496L2V particle to overexpress human EEF2K-mGFP fusion protein.
