

# Product datasheet for RC207595L4

### TULP3 (NM\_003324) Human Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	TULP3 (NM_003324) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	TULP3
Synonyms:	TUBL3
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC207595).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I ORF Mlu I [GCG ATC GC]C <mark>ATG // NNŇ</mark> [ACG CGT]

ACCN: ORF Size: NM\_003324 1326 bp

	TULP3 (NM_003324) Human Tagged Lenti ORF Clone – RC207595L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution N	<ul> <li>Aethod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 003324.3</u>
RefSeq Size:	3106 bp
RefSeq ORF:	1329 bp
Locus ID:	7289
UniProt ID:	<u>075386</u>
Cytogenetics:	12p13.33
Domains:	Tub
Protein Families	: Druggable Genome, Transcription Factors
MW:	49.7 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### Scheme Content of the second s

Gene Summary:This gene encodes a member of the tubby gene family of bipartite transcription factors.<br/>Members of this family have been identified in plants, vertebrates, and invertebrates, and<br/>they share a conserved N-terminal transcription activation region and a conserved C-terminal<br/>DNA and phosphatidylinositol-phosphate binding region. The encoded protein binds to<br/>phosphoinositides in the plasma membrane via its C-terminal region and probably functions<br/>as a membrane-bound transcription regulator that translocates to the nucleus in response to<br/>phosphoinositide hydrolysis, for instance, induced by G-protein-coupled-receptor signaling. It<br/>plays an important role in neuronal development and function. Two transcript variants<br/>encoding distinct isoforms have been identified for this gene. [provided by RefSeq, May 2009]
