

Product datasheet for RC207612L2

PEX1 (NM_000466) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PEX1 (NM_000466) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: PEX1

Synonyms: HMLR1; PBD1A; PBD1B; ZWS; ZWS1

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

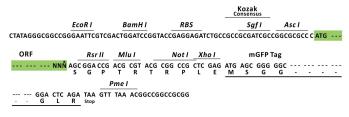

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC207612).

Sequence:

Restriction Sites: Ascl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000466

ORF Size: 3849 bp

PEX1 (NM_000466) Human Tagged Lenti ORF Clone - RC207612L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000466.2, NP 000457.1</u>

RefSeq Size: 4390 bp RefSeq ORF: 3852 bp Locus ID: 5189

UniProt ID: <u>043933</u>

Cytogenetics: 7q21.2

Domains: AAA, AAA

Protein Families: Druggable Genome

MW: 142.9 kDa

Gene Summary: This gene encodes a member of the AAA ATPase family, a large group of ATPases associated

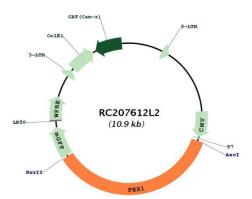

with diverse cellular activities. This protein is cytoplasmic but is often anchored to a

peroxisomal membrane where it forms a heteromeric complex and plays a role in the import of proteins into peroxisomes and peroxisome biogenesis. Mutations in this gene have been

associated with complementation group 1 peroxisomal disorders such as neonatal adrenoleukodystrophy, infantile Refsum disease, and Zellweger syndrome. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Sep 2013]
