| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

| Gene Summary:     | This gene encodes a protein that belongs to a family of apoptotic suppressor proteins.<br>Members of this family share a conserved motif termed, baculovirus IAP repeat, which is<br>necessary for their anti-apoptotic function. This protein functions through binding to tumor<br>necrosis factor receptor-associated factors TRAF1 and TRAF2 and inhibits apoptosis induced<br>by menadione, a potent inducer of free radicals, and interleukin 1-beta converting enzyme.<br>This protein also inhibits at least two members of the caspase family of cell-death proteases,<br>caspase-3 and caspase-7. Mutations in this gene are the cause of X-linked lymphoproliferative<br>syndrome. Alternate splicing results in multiple transcript variants. Pseudogenes of this gene<br>are found on chromosomes 2 and 11.[provided by RefSeq, Feb 2011] |
